FOR - Jamvant's Reminder

Solve

The MP4's audio has an SSTV transmission mixed into it. The audio is 6:07 long, and the SSTV part starts around 2:25. Cropping 130 seconds from the 145-second mark gets the whole thing. The decoder picks it up as Martin M1 and gives a 320x256 image of Hanuman and Jamvant on the shore, with the flag written in the sand in the middle:

```

Reproduce

Needs FFmpeg and the decoder from `requirements.txt` (installed into `.venv`). `./repro.sh` extracts `audio.wav`, crops it to `sstv.wav` and writes `received.png`. It deletes the WAVs afterwards unless you pass `--keep-audio`.
